

I am a customer of XM Satellite radio and find its services to be exceptional and of great value, both in my local area and when I am driving outside my area which I frequently do. Traffic, weather and news are amazing on XM! Nothing should be done to interfere with this. Also the programming is fantastic, a million times better than on regular radio. Satellite radio should not altered or interfered with in any way!

I urge the FCC to reject the NAB petition 04-160 which would attempt to dictate what I could choose to hear on XM radio. We still live in a free society, I am paying for the XM service and I know where the channel selection button is and the on/off button. I do not need nor do I want anyone, including the NAB or the FCC to tell me what my choices are for listening to XM. It is bad enough that the FCC is doing this on regular radio and television. Leave satellite radio alone and trust that the listeners can handle the programming just fine without regulation or interference.

Thank you.
